

Gary G. Wilde collection

*This photograph shows the steam plant used during the construction of Stampede Tunnel in the background and Switch No. 1 with Bridges Nos. 1 and 3 leading to it.*

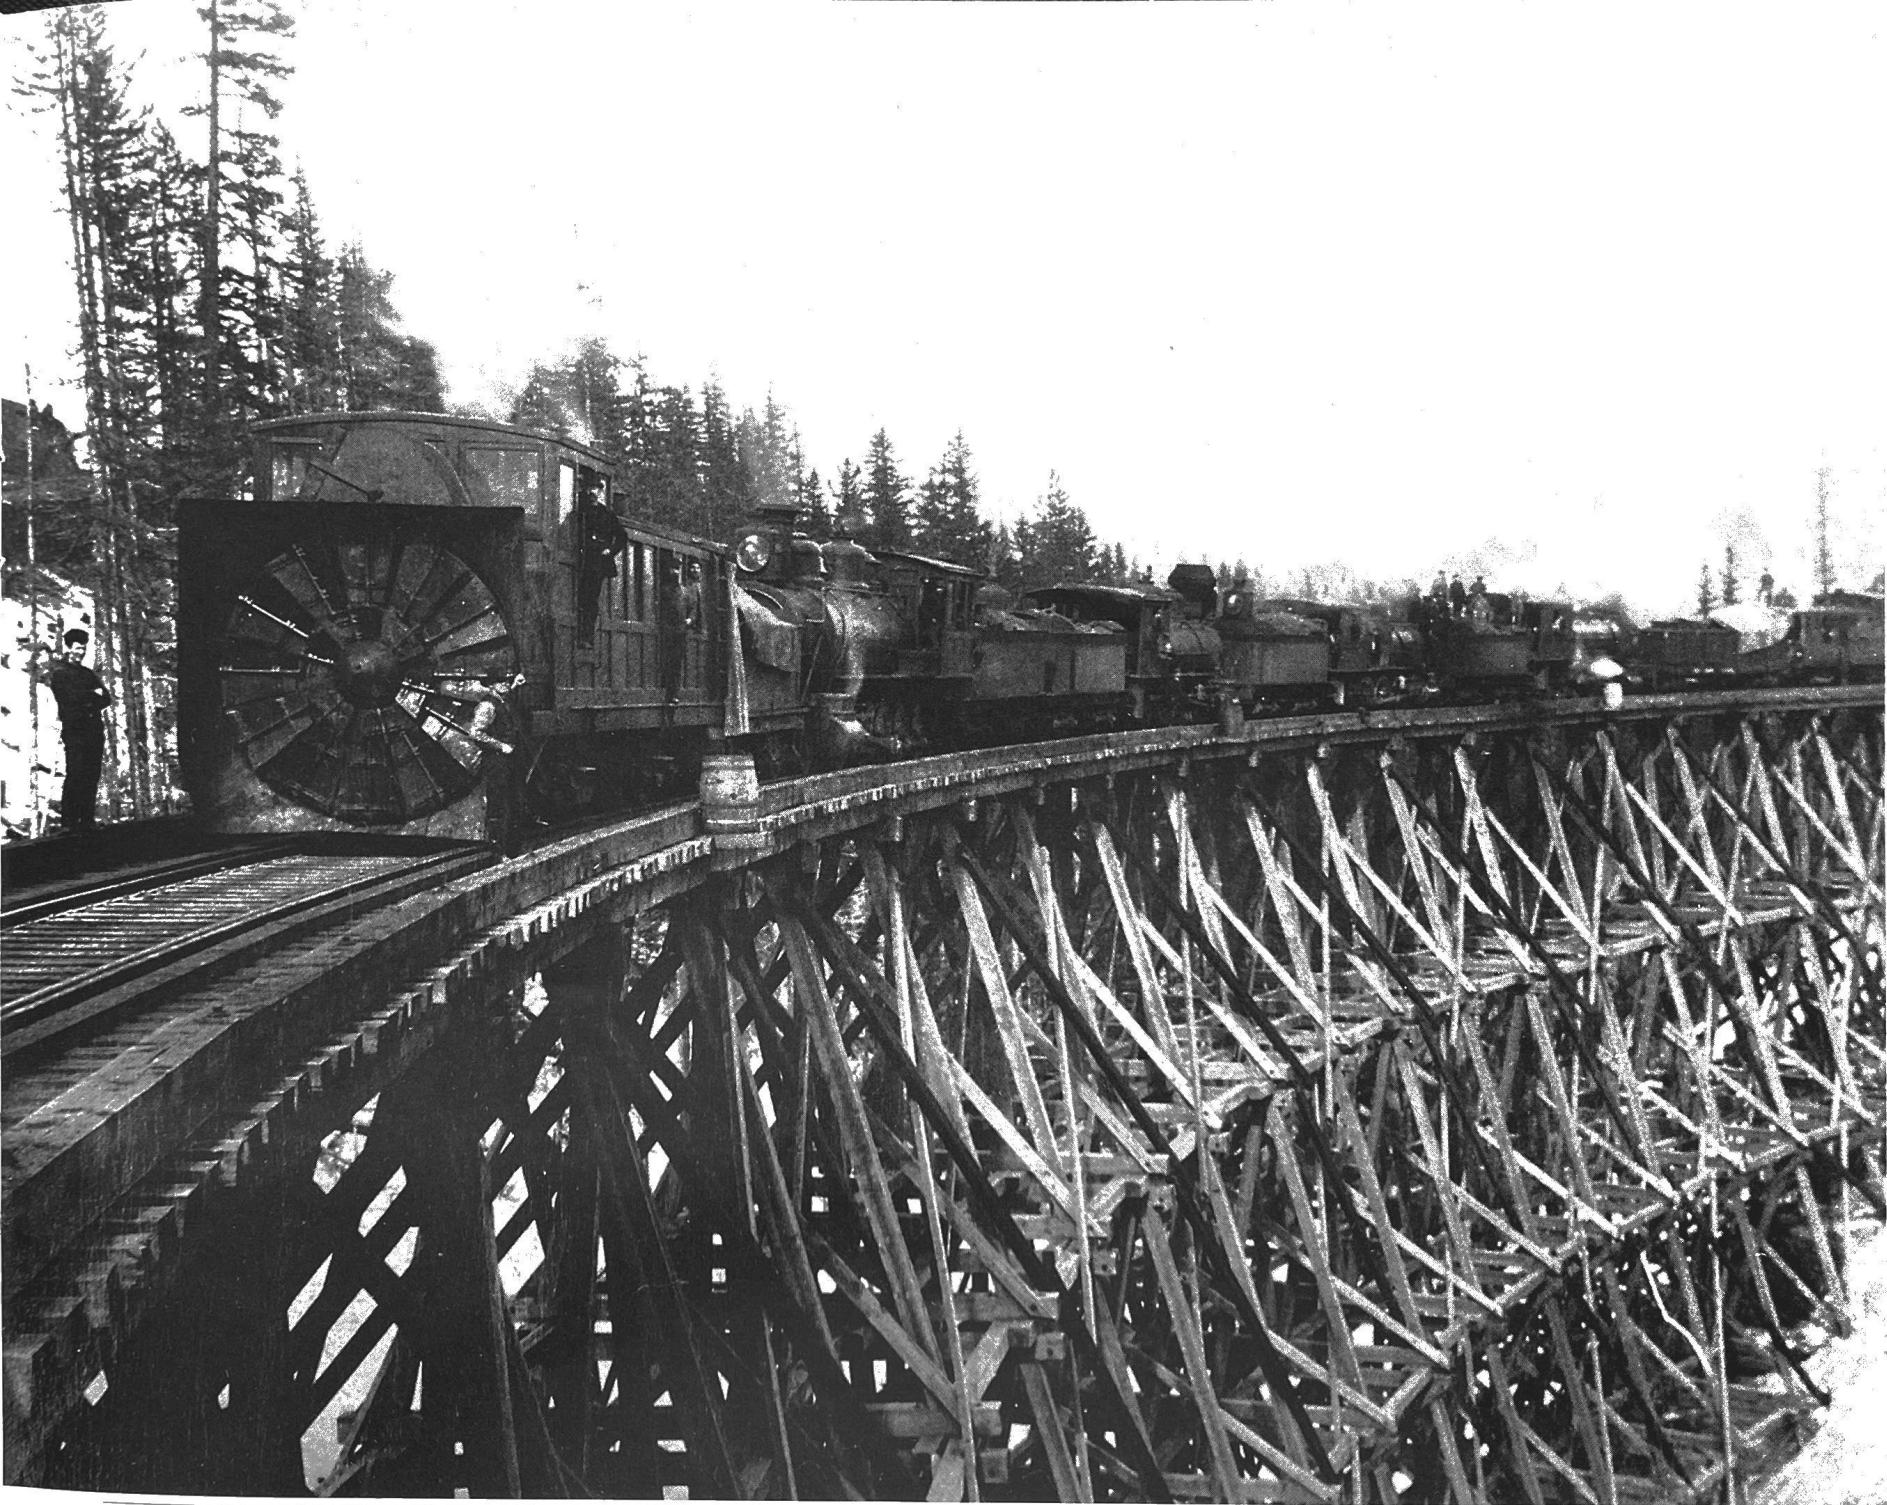

Decapod (2-10-0) No. 500, typical of the type used on the switchback line.

Jim Fredrickson collection

Jim Fredrickson collection

This photograph was taken from Bridge No. 1. It shows Martin with the steam plant in the center and Bridge No. 2 on the right. Note the narrow-gauge track leading from the tunnel. This track was used to move supplies to the tunnel and trailing from to tunnel during construction.

New rotary snowplows pose on the Mosquito Creek Bridge (No. 1) just after they were purchased and sent to Stampede Pass.
